

## GETTING STARTED WITH THE SUPPORT MANAGER

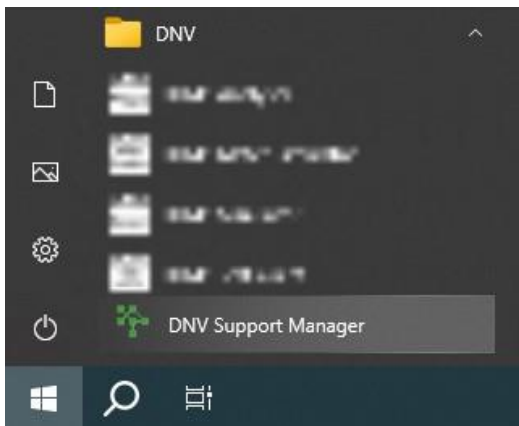

The DNV INC Support Manager helps you to check and download new software versions and to update your CodeMeter dongle after an SLA renewal.

### Installation

You can download the INC Support Manager from: <https://tool.support-inc.dnv.com/>

The Support Manager can be started via the Windows Start Menu:

You need a USB CodeMeter dongle with product code 50. If your dongle doesn't have this code 50 please contact the [pc.helpdesk@dnv.com](mailto:pc.helpdesk@dnv.com) and attach the CodeMeter license request file (see Annex A).

### Check and download new software versions

You can download and install the newest (providing you have an active SLA) and previous versions of the software licensed in your CodeMeter dongle. You can additionally download Release notes for the newest version of available software.

The Support Manager itself will also be automatically updated on startup when necessary.

UniGrid Telecontrol 104 Analyser		3.3.0	Download	Install	Release notes
UniGrid Telecontrol Simulator		2.5.0	Download	Install	Release notes

### Update CodeMeter dongle

When you renew the rental period or SLA you are kindly requested to send the CodeMeter license update request file to our help desk. If you have an email client on the computer you can use the “Send Update File” button. Otherwise you can use the “Create Update File” button and send the generated license update file to [pc.helpdesk@dnv.com](mailto:pc.helpdesk@dnv.com) manually.
